

PubChem Structure Validation — Analysis Report

ModelSEEDDatabase · Validate_PubChem_Structures.py · 2026-06-01

Result: 68 existing compound structures corrected, 40 new compounds resolved, 3 removed.
Phase 5 applied 111 structural corrections (70 STEREO_DIFF, 20 PROTONATION_DIFF, 21 pKa);
109 produced a visible before/after change (the remainder land on newly-added compounds).
415 further SMILES were re-canonicalized with no chemical change (identity preserved).

Change-type breakdown (68 corrected)

change type	count
Stereochemistry gained	48
Stereo/representation change	13
Protonation + stereo gain	6
Protonation change	1

Reaction-usage context

set	% orphan	median	mean	max
Corrected (68)	44%	1	2.1	42
All structured cpds	38%	1	6.3	28,815
Newly added (40)	10%	3	6.8	65

Corrected compounds are peripheral secondary-metabolites; heavily-used core metabolites were already correct and untouched.

Pipeline (Phases 0-6)

Phase 0 Self-consistency

Parse SMILES; compute missing InChI/InChIKey; verify InChIKey and SMILES/InChI connectivity; recompute formula & charge from InChI. Skip R-group/unparseable.

Phase 1 External-ID lookup

ChEBI/KEGG aliases -> PubChem CID via xref. xref conflicts scored against stored InChIKey.

Phase 2 Name lookup

Batch name -> CID; disambiguate multi-hit by InChIKey blocks then Tanimoto.

Phase 3 Recovery

Direct InChIKey then InChI lookup for still-unresolved/mismatched.

Phase 4 Classification

MATCH / PROTONATION_DIFF / STEREO_DIFF / MISMATCH / NOT_FOUND / XREF_CONFLICT / AMBIGUOUS; sub-classify mismatches (tautomer/salt/metal/wrong-mapping/isomer).

Phase 5 Corrections

STEREO_DIFF (PubChem >= stored stereo, no inversion incl. /m enantiomer guard, consistent SMILES/InChIKey); pKa protonation at pH7 (borderline 6-8 skipped, strong-acid & metal-complex guards). Rejections logged.

Phase 6 Apply & write

Write corrections to All file; recompute formula/charge; canonicalize all SMILES; rebuild Unique via dev-branch picker (InChI>SMILE, multi-DB agreement, source priority); post-correction consistency check; render before/after 2D diagrams.

Items for manual review

Manual review: cpd35694 (R)-2-(phosphomethyl)malate — PubChem (R) matches the name, stored (S) likely wrong (kept stored conservatively). cpd26222 DDF — inversion, no name descriptor. cpd23840 ABTS — radical InChI re-parse warning (pre-existing).
