

PubChem Structure Validation — Analysis Report

ModelSEEDDatabase · Validate_PubChem_Structures.py

Result: 58 existing compound structures corrected (visible change), 10 InChIKey normalizations (field-only, no structural change), 40 new compounds resolved, 3 removed. A further 427 SMILES were re-canonicalized with no change to identity (InChIKey unchanged).

Structural corrections (58)

change type	count
Stereochemistry added	48
Protonation + stereochemistry	6
Stereochemistry change	3
Protonation corrected	1

Other changes

category	count
InChIKey normalizations (no visible change)	10
Newly added to Unique file	40
Removed from Unique file	3
SMILES re-canonicalized (cosmetic)	427

Pipeline (Phases 0-6)

Phase 0 Self-consistency

Parse SMILES; compute missing InChI/InChIKey; verify InChIKey and SMILES/InChI connectivity; recompute formula & charge from InChI.

Phase 1 External-ID lookup

ChEBI/KEGG aliases -> PubChem CID via xref; xref conflicts scored against stored InChIKey.

Phase 2 Name lookup

Batch name -> CID; disambiguate multi-hit by InChIKey blocks then Tanimoto.

Phase 3 Recovery

Direct InChIKey then InChI lookup for still-unresolved/mismatched compounds.

Phase 4 Classification

MATCH / PROTONATION_DIFF / STEREO_DIFF / MISMATCH / NOT_FOUND / XREF_CONFLICT / AMBIGUOUS; sub-classify mismatches.

Phase 5 Corrections

STEREO_DIFF (PubChem $\geq$ stored stereo, no inversion incl. /m enantiomer guard); pKa protonation at pH7 (borderline 6-8 skipped, strong-acid & metal-complex guards).

Phase 6 Apply & write

Write corrections; recompute formula/charge; canonicalize SMILES; rebuild Unique via dev-branch picker; post-correction checks; render diagrams.

InChIKey normalizations (10)

Field-only fixes: the stored InChIKey did not match its own structure (usually a spurious stereo flag) and was corrected. The molecule/SMILES is unchanged, so there is no before/after diagram.

cpd_id	rxns	InChIKey (before -> after)	name
cpd01476	42	ZCFFYALKHPIRKJ-UJJXFSCMSA-L -> ZCFFYALKHPIRKJ-UHFFFAOYSA-L	7,12-diethenyl-3,8,13,17-tetramethylporphyrin-2,18-dipropanoate
